- Spanish - Intermediate

Technical Skills

- Python
 - Django
 - Django REST framework
 - unicorn
 - Flask
 - FastAPI
 - reportlab
- Javascript
 - Vue
 - Vuex
 - Vuetify
 - React
 - HTMX
- HTML

EXPERIENCE

Lead Developer, April 2024 to Present

Skyls.io - Lyon, France

I led a team of four developers in creating a custom web application that allowed users to manage contracts, billing, and recruitment processes, centralizing all of their contractors and subcontractors in one platform.

- Implemented **Agile methodologies**, managed the project backlog, and coordinated sprints to ensure timely delivery.
- Inspired by open-source, I planned the project's technical roadmap and managed bug tracking using **GitHub Issues**.
- Designed the architecture of the project around server side rendering with **Python** and **Django** on top of **PostgreSQL**.
- Used **JavaScript** and **HTMX** for a complete yet lightweight and easily debuggable frontend.
- Helped our designer setup and manage a design system based on **DaisyUI** (CSS + Tailwind).
- Structured and managed the hosting of the project on **Google Cloud Platform** for efficient use of existing GCP resources
- Extensively used internal cloud APIs such as **Google Meet** and **Google Calendar** for automating recruitment processes, and **Google OAuth** for user authentication, among others.
- Structured multiple environments for staging, PR preview, and stress testing at a low cost by fully leveraging **Docker**.
- Implemented **CI/CD** pipelines using **GitHub Actions** for automated testing, linting, and deployment.
- I had the chance to lead and mentor an apprentice and an intern in their development as junior developers through **pair programming**, **code reviews** and discussions.
- Ensured they felt comfortable and confident in their work, and in the workplace, I also encouraged them to take on more responsibilities as they progressed.

- CSS
 - SCSS
 - Tailwind
 - DaisyUI
- SQL
 - PostgreSQL
 - MySQL
 - SQLAlchemy
- Git
 - Github Issues
 - Github Actions
- Docker
 - Docker Compose
 - Image building
 - Dev environments
- Kubernetes
- Cloud development
- Google Cloud Platform
 - Google OAuth
 - Google Meet API
 - Google Calendar API
 - Google IAM

Soft Skills

- Teamwork
- Patience
- Optimism
- Calmness

Fullstack Developer, April, 2022 to December 2023

SOCOTEC - Lyon, France

During my two years of apprenticeship at SOCOTEC, I primarily worked on a project called AMOS, an internal web application used by the company's engineers and external clients to classify and manage buildings and their components. This pivotal project marked the beginning of a series of applications designed to build on the company's legacy successes.

This project taught me nearly everything I knew about web development at that point and gave me the opportunity to work with a team of experienced developers who helped me grow and learn, preparing me to take on management responsibilities in my next role.

The project was built using **Python** and **Django** on the backend, and **Javascript + Vue.js** on the frontend.

We relied heavily on our existing **microservices** architecture to build new features, as well as on our open-source project; **django-socio-grpc**, a toolkit for building gRPC services inspired by the Django REST framework.

EDUCATION

Professional Diploma in Python Development 2022/2023

OpenClassrooms - Lyon, France

This comprehensive program provided intensive training in Python programming, web development, and application building.

Technical Diploma in Web Development 2021/2022

OpenClassrooms - Lyon, France

Final Project: Modernization of a legacy app using React, refactoring existing features to enhance UX/UI.

Courses in Computer Science and Mathematics

University of Geneva - Genève, GE

For three semesters I took several courses in computer science and mathematics to deepen my understanding of the theoretical aspects of programming and problem-solving.

Google Data Analyst Certificate

Coursera - Online Learning Platform
